

PUBLISHING YOUR PAGE.

Following the next steps your going to be able of publish a page using github.

1.

To initialize the process you need to push to the main branch (or the branch to publish) the whole code.

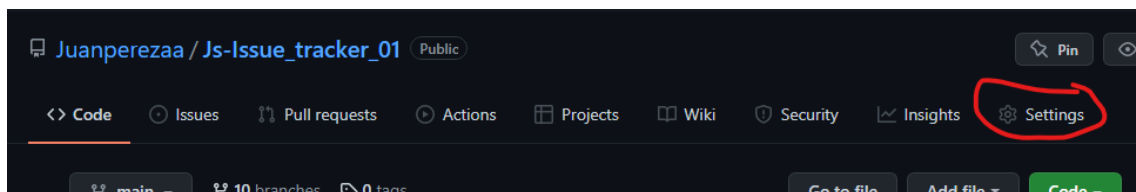

You can use the IDE plugins related to github or using the git commands

- `git add .` (to save all your changes)
- `git commit -m "message"` (to commit your saving changes)
- `git push origin main` (to push the whole commit)

2.

Once you have your repository updated, you need go to the repository settings

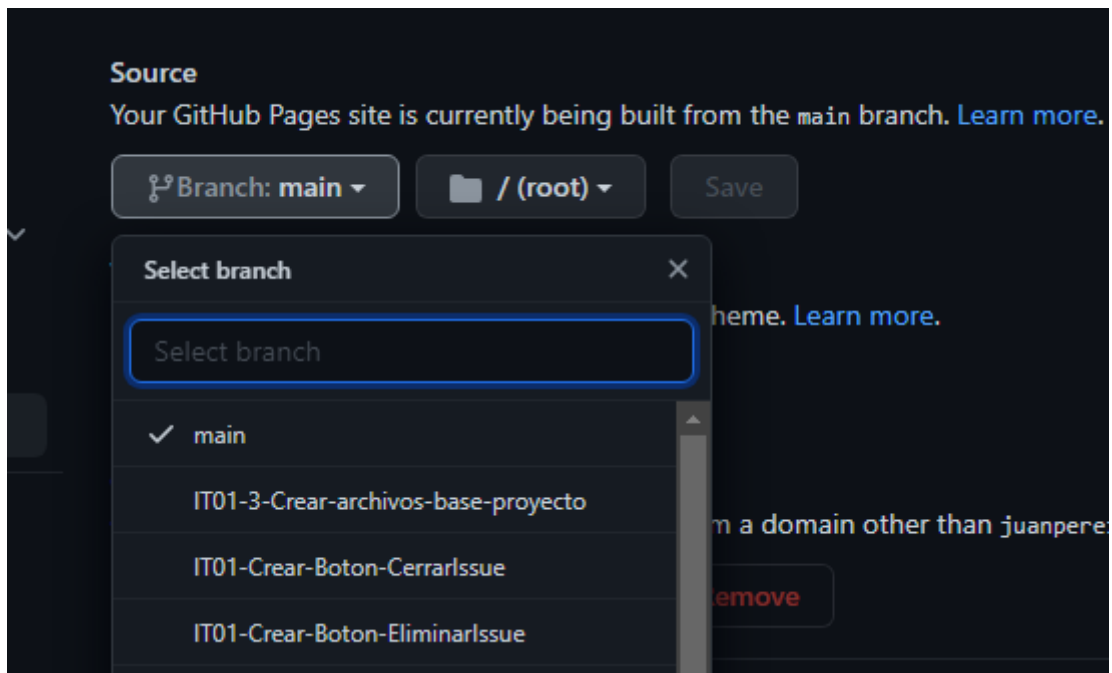

And search for GitHub Pages

Then just click on "Check it out here"

GitHub Pages

Pages settings now has its own dedicated tab! [Check it out here!](#)

Once you opened it, in this place your going to choose your branch to publish, select the folder root and click to save.

3.

Now your page is published.

GitHub will show the url like this.

GitHub Pages

GitHub Pages is designed to host your personal, organization, or project pages from a GitHub repository.

✓ Your site is published at https://juanperezaa.github.io/Js-Issue_tracker_01/
